v12 new features

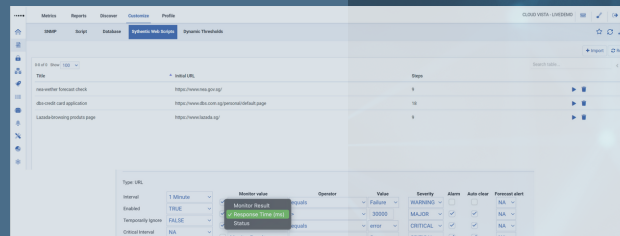

1 AI Ops

NetGain Observability suite, powered by AI, simplify operations and apply automation to IT Operations in the pursuit of operational excellence.

- Ensure visibility into all aspects of IT to diagnose problems before they occur
- Generate actionable insights from massive IT data collected
- Reduce business downtime
- Continuous management of vulnerable risks
- Optimize skills and resource utilization
- Improve operational confidence
- Control complexity and improving reliability

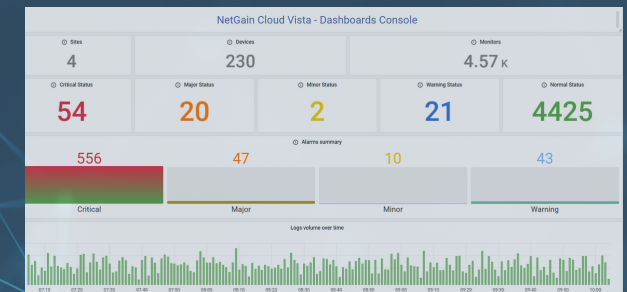

3 Synthetic Monitoring

Monitor your website and applications with an eye towards delivering positive customer experience.

- Baselining around-the-clock network behaviour and objectively measure SLAs.
- Analyze trends and variances for peak and non-peak hours for better capacity planning
- Run continuous testing to know the state of your end users experience

2 Dashboard 2.0

Dashboard that observe everything. Create, explore and share your data through beautiful, flexible dashboard templates. With Dashboard 2.0, query, visualize and understand your data all from a single view.

- Unify your data through a single pane of glass
- Breakdown silos and empower teams with shared access to data
- Foster collaboration and transparency through dashboard sharing in the organization
- Flexibility and versatility
